

The University of North Texas  
Departments of Learning Technologies, Information Science, and Speech-Language Pathology  
are conducting a research and training study on

## Young Adults with Autism Spectrum Disorder: Developing Social and Communication Skills for the Workforce

Online and at the Fort Worth Museum of Science and History

If you have been diagnosed with autism spectrum disorder and are age 18 or older, you may qualify to participate in this research/training study examining the effects of training on the **social skills needed for career readiness for young adults with autism spectrum disorder.**

Eligible participants will receive free 24/7 access to the JobTIPS career training website. They will participate in weekly online training sessions for 4 months, and will meet with the training group monthly at the Fort Worth Museum of Science and History. No compensation will be given for participating in this study.

*Principal Investigator: Dr. Deborah Cockerham, UNT Department of Learning Technologies*
