- \* please submit questions upon RSVP
- \* over Google Meet - link will be provided upon RSVP

Dr. Loveland is an internationally known researcher specializing in autism spectrum disorders (ASD). She is best known for her work on social-emotional development and the neuropsychology of ASD. Her current research focuses on application of new technologies to the treatment of mental illness in ASD; gene-environment interactions associated with ASD; and cross-cultural influences affecting parenting stress in mothers of children with ASD.
